

# INTER-AGENCY ACCESS REQUEST FORM

## Florida Dept. of Transportation District Four Intelligent Transportation Systems

Florida Department of Transportation District Four currently offers an application for use by first responders and public agencies for no charge, but are restricted in use and not available to the general public or private entities due to bandwidth capacity. Please use the form below to request a user ID and a password for the application. One form needs to be completed for each person in your organization that will use the application.

### **Inter-agency Video and Event Data Distribution System (iVEDDS):**

The Inter-agency Video and Event Data Distribution System (iVEDDS) distributes live motion CCTV camera video feeds from District Four using the existing Internet. This tool provides streaming video from CCTV locations along I-75, I-95, I-595 and State Road 84 in Broward County. Emergency response agencies such as 911 centers; police, fire and ambulance stations; transportation management centers; airports and transit authorities can benefit from the live images before or during an incident along the freeways.

Also offered in this application is event data (including Palm Beach, Martin, St. Lucie and Indian River Counties) which allows first responders and public agencies to view real-time, detailed information about traffic incidents, disabled vehicles, or crashes. The event data provides a full list of traffic events in District Four. Events are hyperlinked to detail screens, providing time stamps, chronology, emergency responders, and other incident clearance information. The event data runs off the SunGuide traffic incident management database, which powers real-time updates.
